

Mission: To provide residents with access to the telecommunications network. And, to ensure residents receive quality and timely service.

Up the Volume . . . and let the VCPS do the talking

The **Volume Control Phone for the Speech Impaired (VCPS)** is featured in this newsletter to help VCPS users understand the features and options on their phone. This is not a new phone. Although it looks like the Volume Control Phone for the Hearing Impaired (VCPH), it is a different phone.

Volume Control Phone for the Speech Impaired (VCPS)*

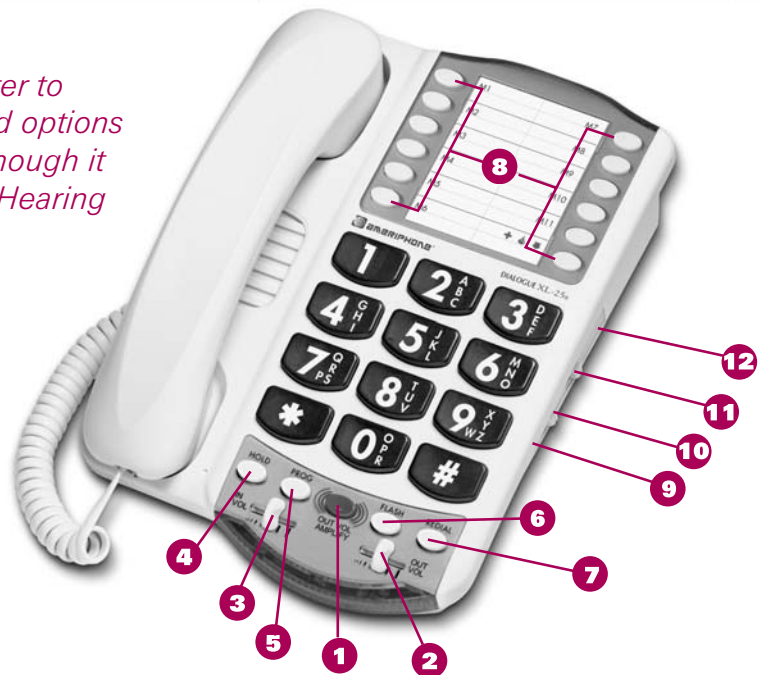

The VCPS amplifies the speaker's voice for louder and clearer calls. It is for individuals who have trouble being heard on the telephone or who have a speech impairment. The VCPS also allows the user to increase volume for an incoming call.

Let's look at features concerned with amplification first.

For speaking volume:

Look at the diagram of the phone on this page. At the bottom of the phone in the middle, you will see a button called **OUT VOL AMPLIFY (1)**. To the right and below this button is a sliding control called **OUT VOL (2)**. And to the left is the **IN VOL (3)** sliding control.

*Relay service not required with this phone.

1. To make your voice louder, press the **OUT VOL AMPLIFY (1)** button and release it. Then slide the **OUT VOL (2)** button to the right to amplify your voice. Adjust it until the person you are talking to says he or she can hear you.
2. The amplifier will turn off automatically when you hang up the telephone. If you want the amplifier to remain at the most recent setting, slide the switch

underneath the phone from Manual to Auto.

For listening volume:

3. To make the incoming sound louder, adjust the sliding control labeled **IN VOL (3)** to suit your hearing.

Now let's examine some of the other features of the phone. Look at the diagram again.

4. At the left bottom of the diagram is a button labeled

continued on pg. 2

About The Florida Link

The Florida Link is FTRI's newsletter—your source for news and information on your telephone equipment and resources. This newsletter is mailed to everyone who has FTRI equipment. Should you have a change of address or equipment needs, please call FTRI Monday—Friday, 8:30 a.m.—5:00 p.m.

FTRI Customer Service: 1-800-222-3448 (V) or 1-888-447-5620 (TTY)

Florida Telecommunications FTRI Relay, Inc.

1820 E. Park Ave., Suite 101
Tallahassee, FL 32301

<http://www.ftri.org>

continued from cover

HOLD (4). Press this button to put someone on hold.

5. Next to the **HOLD** button is the **PROG (5)** button. This is used to store numbers in the phone's memory. Here's how it works:

- Lift the handset and press the **PROG** button.
- Enter a phone number just as you would dial it.
- Press **PROG** again.
- Press one of the **MEMORY (8)** buttons to store this number.
- Hang up immediately.

The number is now stored into the memory button you selected. (Don't forget to label it so you will know whose numbers are stored where!)

You may program 12 numbers; the phone numbers may be up to 16 digits long. You may also change the memory numbers whenever you wish by using the same process.

6. Next to the **OUT VOL AMPLIFY** button is the **FLASH (6)** button. Press this button to access special services from your local phone company such as Call Waiting and 3-Way Calling.

FTRI helps Florida residents who are hearing- or speech-impaired with specialized telephone equipment needs.

- 7.** The last number **REDIAL (7)** button is beside the **FLASH** button. Press this button to redial the last number you dialed.
- 8.** The last set of buttons is the **MEMORY (8)** buttons. (You are already familiar with these buttons.) Just press one of the **MEMORY** buttons to fast dial

a number you have entered into the phone's memory.

Now look below at the diagram of the side of the phone. You will see four switches:

- 9.** The **DIAL (9)** switch allows you to set your phone to use either tone or pulse.
- 10.** The **RINGER (10)** switch allows you to adjust the volume of your ringer. You may choose either OFF, LO, or HI.
- 11.** The **RING TONE (11)** switch allows you to set the pitch of your phone ringer. You may choose LO or HI.
- 12.** The **AUDIO OUTPUT (12)** jack allows you to connect your phone's audio output to an assistive listening device. To use this port, plug in a compatible auxiliary cable and connect it to your assistive listening device. Speak into your handset when you use the Audio Output connection.

Acronyms/Abbreviations

Here is a list of acronyms or abbreviations you will frequently see used in the newsletter. You may want to keep this list to refer to.

FTRI (Florida Telecommunications Relay, Inc.) Abbreviations:

- **ARS**—Audible Ring Signaler
- **ILA**—In-Line Amplifier
- **RDC**—Regional Distribution Center
- **TA**—Training Agency
- **TRS**—Tactile Ring Signaler
- **TTY**—Text Telephone, also known as a Telecommunications Device

- for the Deaf or TDD
- **VCO**—Voice Carry-Over Phone
- **VCO/HCO/TTY**—Voice Carry-Over/Hearing Carry-Over/Text Telephone
- **VCPH**—Volume Control Phone for the Hearing Impaired
- **VCPS**—Volume Control Phone for the Speech Impaired
- **VRS**—Visual Ring Signaler

Florida Relay Abbreviations:

- **CD**—Could
- **CUL**—See you later
- **CUZ**—Because
- **GA**—Go Ahead

- **HD**—Hold
- **MTG**—Meeting
- **NBR**—Number
- **OIC**—Oh, I see
- **OPR**—Operator
- **PLS**—Please
- **Q**—Question mark
- **R**—Are
- **SHD**—Should
- **SK**—Good-bye
- **SKSK**—Stop keying
- **TMW**—Tomorrow
- **U**—You
- **UR**—Your
- **PC**—Personal Computer

Partners in Action . . .

Business Partnership Program (BPP)

In 2002, we kicked off our BPP and we are happy to announce that it has been a huge success. In our newsletter last year we listed only 15 BPP partners from 2 cities in Florida. This year that number has grown to 1,138 new BPP partners in 108 cities! So far, approximately 199,422 employees have been exposed to BPP training. Central and Southeast Florida are next on our lists of cities to visit.

We encourage you to let us know of businesses in your community that you frequent or would like to communicate with through the relay. If you know of such a business, call us at 1-888-292-1950, ext. 232 and give us the name of the business, its location, and phone number so we can contact it.

Statewide BPP Partners

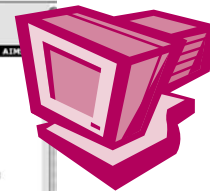

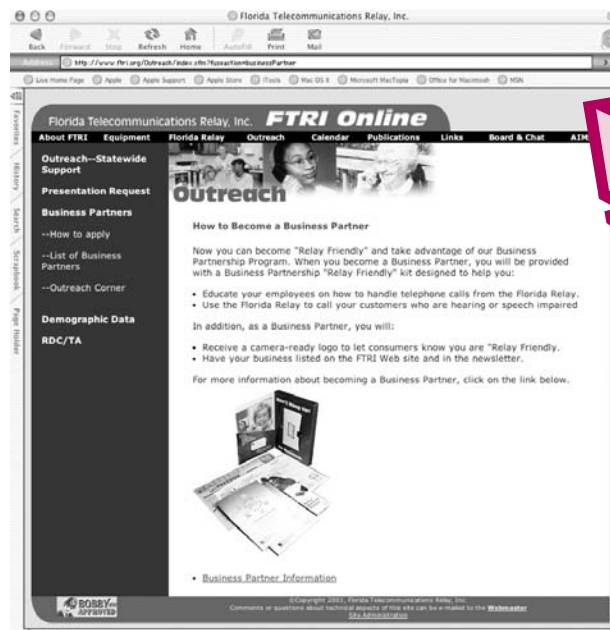

- AmSouth Bank Corporation, Tampa*
164 branches statewide including
 - Northwest Florida Region (31 branches)
 - Central Florida Region (57 branches)
 - Eastern Florida Region (76 branches)
 - Corporate Publix Super Markets, Inc., Lakeland*
625 stores statewide including
 - 568 current stores
 - 57 new stores planned
- *Check your local area for the nearest AmSouth Bank branch and Publix Super Market.

Power Outage? Can I Still Use the Specialized Features on My Phone?

Yes, you can, if your batteries are not low.

As a safety precaution, always keep a set of batteries on hand for the VCPH, VCO/HCO/TTY, VCO, VCPS, and ILA equipment.

For TTY users, please do not attempt to change the batteries. Call FTRI for more information on changing these batteries at 1-888-447-5620 (TTY).

Depending on the type of phone equipment you have, check the following chart information on batteries so that you will be sure you have the appropriate batteries on hand and that you are not caught in a power outage with low batteries.

Phone Type	Special Notes	Duration of Battery	Indicator Light	Type of Battery	Battery Included
Volume Control Phone for the Hearing Impaired (VCPH) 	Operates as a regular phone (without specialized features) with no power or batteries.	48 hours	Low Battery	4 AA alkaline	No
Voice Carry-Over/Hearing Carry-Over/Text Telephone (VCO/HCO/TTY) 	Battery backup saves settings and message changes during power outage.	45 minutes	None	One 9-volt alkaline	No
Voice Carry-Over (VCO) Telephone 	Requires power to operate.	4-8 hours	None	4 AA NiCad (nickel-cadmium)	No
Text Telephone (TTY) 	Batteries last longer if you turn off printer when using battery power. Important: Do not attempt to change the battery yourself.	60 minutes	Low Battery	Contact FTRI	Yes
Volume Control Phone for the Speech Impaired (VCPS) 	Operates on telephone line power only. No external power needed.	Optional battery for extra incoming ring indicator only. Normal usage 3-6 months.	Low Battery	One 9-volt alkaline	No
In-Line Amplifier (ILA) 	When battery is drained, handset still operates if volume control switch is moved to minimum position.	Normal usage 6-12 months	Battery Working	One 9-volt alkaline	Yes

Speech Impairments in Florida

It is estimated that nationally 10 to 12 percent of the population has a speech impairment. However, Florida has a population that is somewhat unique. Here, the number goes up to 16 to 18 percent. We have many senior citizens who have moved here to retire, and this move-

ment has increased the number of individuals who suffer from communication disorders. Some of these disorders in senior citizens are caused by strokes, Alzheimer's disease, and dementia. Thus, the importance of providing these individuals with alternative means of interacting in

their environment so that they can become independent cannot be emphasized enough.

Susan R. Snover, Ed.D., CCC/SLP
Program Director, Speech-Language Pathology Services
Central Florida Speech and Hearing Center

Florida Public Service Commission (FPSC)

The FPSC regulates Florida's utilities and is responsible for overseeing TASA. If you have a problem or question, you can call or write the FPSC for assistance.

TO CALL THE FPSC, dial 1-800-342-3552 (Voice) menu only. TTY users must call through Florida Relay using the same number. Once the menu starts, ask the relay operator (OPR) to press the number 2. Then wait for a person to answer your call to start your conversation.

IF WRITING, mail to
 FPSC
 2540 Shumard Oak Blvd.
 Tallahassee, FL 32399
 Fax: 1-800-511-0809
 FPSC home page:
<http://www.psc.state.fl.us>

From the Office

Message from the Executive Director

Thank you for helping us get the word out about FTRI. As word about our services and equipment has spread, we have experienced amazing growth.

For example, last year our number of new clients grew to 26,129, a six percent increase over the previous year. We distributed 54,499 pieces of equipment and our total number of distribution services was 47,313.

We also now have over 35 locations where you can receive FTRI equipment and services.

Our product line is also growing. Qualified Florida residents who have undergone a laryngectomy can now receive a specialized telephone called TeliTalk. This special telephone comes with two accessories, including a handheld speech aid and a headset with an attached

microphone. The headset will allow a person to use the speech aid with one hand while freeing up the other hand for writing. To find out more about the TeliTalk, please contact the FTRI office at 1-800-222-3448 or visit our Web site at www.ftri.org.

We believe that our growth is also a result of our dedicated staff. Two of our FTRI employees, Fran Burns and Brett Bascom, have celebrated their 10-year anniversary with us. Please join me in congratulating them. Thanks for a job well done!

We hope that the coming year will bring more growth as we strive to foster telephone independence.

Crystal River and Port St. Lucie Are Now Regional Distribution Centers (RDCs)

And open to serve you! Residents in the Crystal River and Port St. Lucie areas now have a place to go to receive FTRI equipment and services. The Citrus Hearing Impaired Program Services is located at 105 SE Highway 19(rear), Crystal River, FL 34429. The Deaf Service Center of the Treasure Coast at Port St. Lucie is located at Fountain Plaza, 10016 S. Federal Highway, Port St. Lucie, FL 34952. They are equipped with specialized telephones and ring signaling devices from FTRI to serve your needs.

These staffs are ready to provide you with equipment distribution, maintenance, training, and outreach presentations as well as instruction on how to use Florida Relay. FTRI's Equipment and Outreach Program services are provided **at no charge**.

Speech-to-Speech (STS)

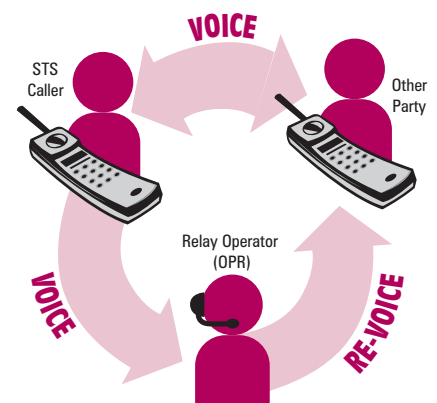

A Brief History of Speech-to-Speech Relay Services

Until recently, many people with speech impairments were reluctant to use the telephone. They feared that they would not be understood, or worse yet, people would just hang up on them. All of that changed when Dr. Bob Segalman created a system called Speech-to-Speech (STS), which is available through Florida Relay. With STS, people who have speech impairments can now use the telephone worry-free.

Segalman explains how the system works, "I and other people with speech disabilities call toll free to reach an Operator (OPR). S/he places the call for me and repeats my words to the listener. The OPR voices what I say after every three to four words, a procedure I adapted from face-to-face-voicing."

When asked why he created STS, Segalman explains, "STS grew out of my own attempts to be understood over the telephone despite my cerebral palsied speech. Before STS, people would hear my labored speech and assume that I was a crank caller and hang up."

Users of the STS system say that it has changed their lives. Segalman asked one STS user if she would ever attempt the same calls on her own without STS. She replied, "Never in a million years!" Several employers of users say that STS improved on-the-job communication. As for Segalman, he says, "Next to getting married and earning my Ph.D., developing STS is the most exciting thing I ever did. Imagine my joy helping others overcome what had been my own greatest frustration!"

To make a Speech-to-Speech relay call, dial 1-877-955-5334. The STS relay toll free access number can be programmed into your telephone memory for easy dialing. If you need assistance in using STS relay, call Sprint Customer Service at 1-800-676-3777 (English) or 1-800-676-4290 (Spanish).*

**VCPS phone not required to make an STS relay call.*
